

Brainmeasures API Overview

Brainmeasures.com is one of the internet's fastest growing and reliable employee education and testing services worldwide. With our wide variety of courses and tests, we help to ensure better careers for job hunters, and better employee performance and skill for companies both small and large. With Brainmeasures.com, there is no limit to what you can accomplish as a professional, or a business owner. Now, we are proud to display our new testing API, which can extend this powerful system of learning and verification to a whole new amazing level.

Brainmeasures offer Two types of APIs, any of these can be consumed by Companies to access our services. These API provide lots of user friendly methods to access valuable information and makes it easier to display the complete product details at your end.

Some of these methods are like:

Listing All the Products (Tests/Exams)

Getting Basic details of a Test/Exam like Total Number of Questions in Exam, Duration etc

Getting Syllabus/Topics of Test/Exam

Creating New Exam and getting Exam Number for a User

Getting Exam Question and Result:

Method-I

- a. Getting Question for Exam Number (1 Question at a time)
- b. Submitting Answer of Question for Exam (Answer of Given Question)
- c. Submitting Exam and Getting Final Result of the Exam.
- d. Get Final Result of Any Exam by Exam Number

Using this method client need not to develop any exam taking interface as Brainmeasures will be developing it and client just need to provide the necessary design template.

In this method Brainmeasures will develop exam page having logo and look and feel similar to the client site theme and client will has to create a sub domain at their end e.g. exam.clinentsite.com exam will happen on Brainmeasures sub domain e.g. clinentsite.brainmeasures.com/exam.aspx.

Then the client sub domain (exam.clinentsite.com) will be forwarded with masking to Brainmeasures sub domain (clinentsite.brainmeasures.com) this will make the final exam URL to look similar to client url. The exam url according to above example will be exam.clinentsite.com/exam.aspx

Method-II

Using this method you can speed up the process as 1 single request will send you all questions, but here client has to develop his own interface to take exam. Brainmeasures will send questions for exam and when Client need Final result Client has to submit answers of all questions of the Exam and Brainmeasures will send back the final Result base on the answers received.

a. Getting All Questions for Exam Number

This will send all Questions with their answer options to the requester

b. Submitting Answers and getting final Result

On completing exam, answers of all questions of a given Exam Number will be submitted and after processing final result will be send back
